

**PSA**

PROFESSIONAL SOFTWARE ASSOCIATES, INC.

**Becoming a team with our clients, we implement the optimal IT solutions to enable companies to focus on core business issues.**

Together, we identify organizational needs, project requirements, design end-to-end solutions, which help our customers gain a competitive advantage in their market.

PROVIDING SOLUTIONS FOR TOMORROW – SINCE 1993

# About us

We got ISO9001:2015 certification proving that it is easy for us to align clients' requirements with the latest technological and market trends. Our team includes PhDs and MCs dedicated to our customers' success.

**1993**

this year we became  
a global technology company

**600+**

successfully  
delivered projects

**6**

years of team  
engagement

**62 000**

man-hours maximum spent  
on the project

**40**

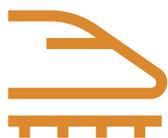

months maximum  
project duration

**20+**

countries on 5 continents  
on the global delivery map

# Main Domains

We started in delivering design and engineering solutions working with old-school technologies. So it is easy for us both to create bespoke innovative solutions and modernize the legacy system.

## Railway

Full control of signaling systems provided by robust and innovative rail IT solutions

## Enterprise IoT

Full cycle IoT implementation for Enterprises in various industries from healthcare to logistics

## Business-in-the-box

Full package for product businesses to launch or scale

# Railway

Leading supplier of rail IT solutions for companies across the globe.

# Areas of Expertise

Delivering Signaling, CAD, Design, QA, and engineering services we focus on the client's needs: reducing cost, improving bandwidth, and increasing safety. It is what we call a customized experience.

## (01) Wayside

---

Our professionals have expertise with interlocking control systems which are a vital part of all Rail systems. We are pleased to provide support with meeting your goals of optimization and improvement in multiple areas.

## (02) Platform

---

PSA has expertise in the development and integration of Public Address/Visual Messaging Systems (PA/VMS) to provide train arrival information for an automated publication to all stations deployed along the rail network infrastructure on a dynamic display.

## (03) Back Office

---

Railroad Back Office is at the heart of all transport networks. The solutions we create for you are currently being utilized by both city transport systems as well as global systems currently utilized all over the world.

## (04) In-Cab Systems

---

The functionality of the console is not only to display mechanical information such as speed and brake/motor conditions but also houses the GPS tracking system and network to allow for communications between the cab and the back office, wayside and platform.

# Enterprise IoT

From concept to market, we deliver the entire IoT Ecosystem.

# Connecting Sensors to Dollars

We balance innovation and structure with our approach to developing optimal business solutions with maximum benefits for our customers

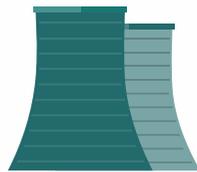

## Verticals

# Full-cycle EIoT development services

The background image shows two men in business suits in a meeting room. One man is pointing at a whiteboard with a pen, while the other looks on attentively. The entire image has a light green overlay.

# Business-in the-box

Creating Instant Enterprise with the balanced product and process flow for a new business start-up or scaling an existing organization's product offering.

# We provide

We help start-ups and enterprises to avoid struggling & failing with business development and technical tasks allowing them to focus only on core tasks. It also provides more effective money utilization.

## (01) Concept and White Board

Collaborating with clients, we elevate, actualize their visions, reflecting clients' expectations of us as a technology service provider.

## (02) Venture Offering

As a robust developing company, we can act as a vendor or mediator between you and VCs, providing detailed third-party reporting.

## (03) Business Infrastructure Setup

Taking care of physical infrastructure, hardware, and software, staffing and recruiting, servers, cloud, etc.

## (04) IT Development Tasks

Our Software and Hardware engineers make sure that development tasks are meeting goals.

## (05) Commercialization

Branding, manufacturing, distribution, and lifecycle maintenance/sales/marketing collateral content, & lead generation.

# Why choose us

At PSA, we believe that successful business relationships and quality service delivery are based on well-understood requirements and a sound engineering process.

## Team

70+ engineers with 8+ years of experience can use all available rail and IoT technologies to assist you in reaching your business goals

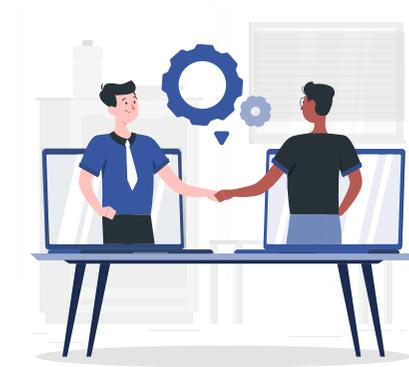

## Time-to-market

From concept to market, we help you complete your projects on schedule and within budget

## Expertise

For nearly 30 years of in-house expertise in hardware and software development, prototyping, testing, and QA

## Transparency

We are in touch with clients at every stage of the project

# Our clients

We constantly focus on surpassing our clients' expectations, which has resulted in long-term relationships with many satisfied clients.
